# Question 1. Create and Design Admission/Enquiry Forms etc.

To create this kind of form, you need to use shapes, text boxes, colors, formatting options, tables, and horizontal lines in MS Word. This is a very good exercise to practice because it will give you an idea of how to use such options practically on various official documents that we use in our daily official life.

Example is shown on the next slide.

<sup>\*)</sup> The table of contents comes between your abstract and your introduction. It should be written in the same font and size as the rest of your text (usually 12pt Times New Roman). At the top of the page, write Contents, centered and in bold. In APA Style, you can use up to five levels of heading, each with its own formatting style. In the table of contents, you should include all level 1 and 2 headings, left-aligned and formatted as plain text. Level 2 headings are indented. Including lower-level headings in the table of contents is optional. Add an additional indent for each level. If you have a lot of headings in your text, you may not be able to include them all—your table of contents should not be more than two pages long in total.

## Quesition 5.

Practice hyperlinking and creating links between Word document texts to D: /, Play songs from Microsoft Word text, and create links between internal and external files?

This is the most important option in Microsoft Word. Most of the processes on the internet contain links. The hyperlink is the starting point in which you learn how things are connected with each other.

# Example:

# Question 6. Design a Happy Birthday Message by using Word Art and print it.

You can use the Word Art option for this. You can create the best wishes message in MS Word. After that, you can print. And give it to the person. It's about creating small things at home. This is also a good way to make kids interested in learning the computer.

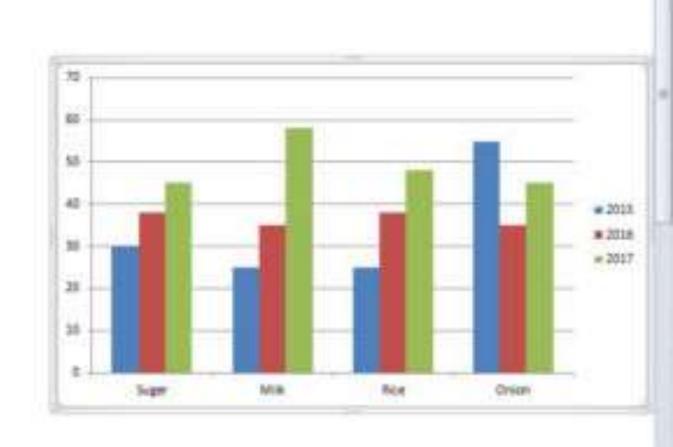

# Question 7. Create a chart and show the product price comparison between years:

The chart option is very important in Microsoft Word and Excel. However, the use of the chart option and any other option in MS Word depends on the demand for a certain content type.

For example, you're writing a book or making notes about something in which you have to write and explain the price comparison between 3-4 years. Then you can use the chart for visualizations to analyze the data.
